Summary

Software engineer with experience building production web applications and backend services across React, Next.js, Node.js, TypeScript, Java, and Python. Strong in API design, performance optimization, system architecture, caching, observability, and algorithmic problem solving.

Experience

Tynari (formerly Printeast) Apr 2026 – Jun 2026

Full Stack Developer

- Built a browser-based SVG design studio with a custom Bezier node editor and 7-mode text-warp pipeline, reducing render time by roughly 40% through algorithmic optimization.
- Built a real-time, non-destructive image filter and pattern designer with browser-safe layer-based editing integrated into the canvas editor.
- Led architecture for a Shopify-style theme store on a microservices backend covering theme editing, product management, and one-click publishing with Next.js and Node.js.

Triveni Industries – Triveni Pumps Division Dec 2024 – Jan 2025

Full Stack Developer (Freelance)

- Built a scalable e-commerce platform with React, TypeScript, Node.js, MongoDB, REST APIs, and microservices, reducing API latency by 35–40% through Redis caching and query optimization.
- Integrated Cashfree payments, JWT session management, role-based access control, and an admin dashboard for analytics and inventory tracking.

Projects

Multilang FAQ API – Production-Style REST Service | *TypeScript, Express.js, MongoDB, Redis, Docker, Swagger, GitH*

- Built a versioned /api/v1 API with validation, rate limiting, strict CORS, request limits, Basic Auth, structured logging, request IDs, metrics, health/readiness probes, and Swagger documentation.
- Implemented an async translation queue with retry support and a fault-tolerant Redis cache with invalidation; added CI for lint, test, and build plus Docker Compose for local deployment.

Stellar Conflict – Browser-Based Space Shooter | *JavaScript (ES6+), HTML5 Canvas, Vite, Tailwind CSS*GitHub

- Built a modular game engine from scratch using OOP, object pooling, spatial partitioning for collision detection, and a state-machine architecture for gameplay states.
- Added asset preloading/caching, progression systems, and error recovery to keep long sessions stable.

Education

GGSIPU – Institute of IT & Management, Janakpuri 2024 – 2026

MCA, Information Technology (coursework complete)

GGSIPU – Institute of IT & Management, Janakpuri 2021 – 2024

BCA, Information Technology

Certifications & Achievements

- Wipro Java J2EE Certification – Enterprise Application Development (2023)
- 1st Place among 50+ teams – ODE TO CODE, Techno Sapiens AIEC (Mar 2024)
- 1st Place – CSS Battle, MATRIX Internware IITM (Oct 2023)

Technical Skills

Languages: JavaScript, TypeScript, Java, Python, SQL, HTML5, CSS3
Backend: Node.js, Express.js, Spring Boot, REST APIs, Microservices, WebSockets, Authentication
Databases: PostgreSQL, MongoDB, MySQL, Redis, Supabase, pgvector, SQL Optimization
Frontend: React.js, Next.js, Tailwind CSS, Three.js
Engineering: System Design, OOP, Data Structures, Unit & Integration Testing, Debugging, Code Review
DevOps: Docker, Docker Compose, CI/CD, GitHub Actions, Vercel, Git
